

#774 Hard Carrying Case

For 90mm ETX Astro Telescopes

The Meade #774 Hard Carrying Case provides a secure environment for your 90mm ETX Astro Telescope during storage or transport. Figure 1 shows a suggested layout for the telescope and its accessories within the pre-cut foam interior.

Meade ETX telescopes are precision optical instruments. Hard shocks may damage or misalign the optics. Take care when transporting the telescope in the #774 Hard Carrying Case since this case provides minimal protection against shock damage. When travelling on a commercial airline keep the hard carrying case as "carry on" luggage. Do not check as separate baggage.

The #774 Hard Carrying Case is equipped with locks and a key.

When placing the telescope in the carrying case, follow this procedure:

- Remove all eyepieces and other accessories from the telescope and store them in their appropriate spots within the case. (The standard-equipment 8 x 21mm viewfinder may remain in its mounting bracket.)
- Attach all telescope dust covers.
- Unlock the horizontal and vertical telescope locks.

NOTE: If the optional Meade #825 Right-Angle Viewfinder is attached to the ETX-90 telescope, remove the viewfinder from the telescope mounting bracket before placing the telescope inside the carrying case. This prevents excessive pressure on the viewfinder bracket when the carrying case lid is closed.

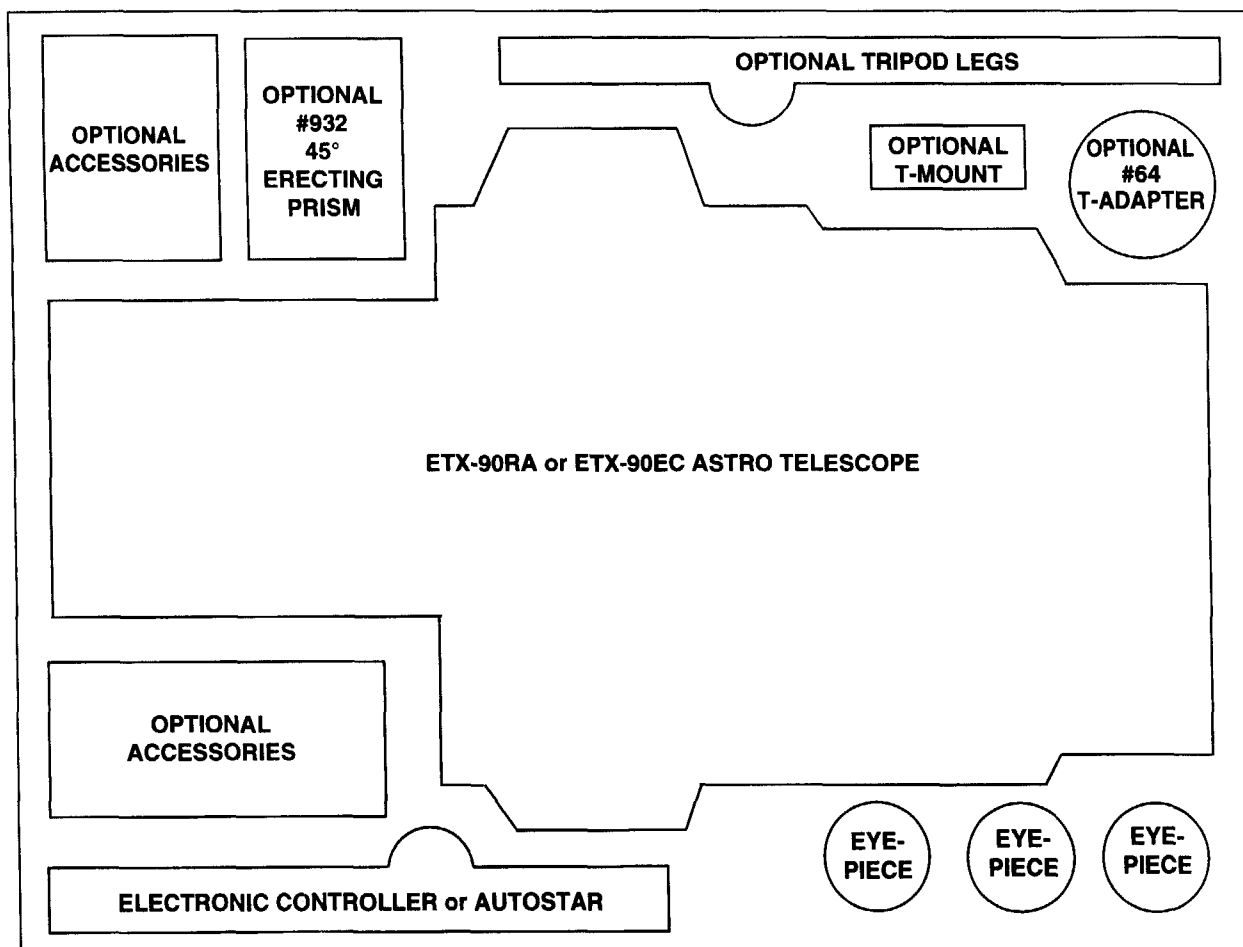

Fig. 1: #774 Hard Carrying Case Internal Layout. (NOTE: Not all accessories shown are included with all ETX models.)
