

Astro-Tech, Celestron, and the night sky . . . meant for each other.

Some things are just meant to go together: peanut butter and jelly; apple pie and ice cream; Astro-Tech, Celestron, and the night sky. Here's another of those combos: a Celestron CG-5 go-to mount and an Astro-Tech AT8IN 8" f/4 Imaging Newtonian. The background photo shows the kind of image the \$449 AT8IN can produce in the hands of a talented hobbyist. Ready to take your own images? We have imaging Newts from 6" to 12" in aperture and Celestron mounts to fit them all.

AT8IN image of the Horsehead and Flame nebulae in HaRGB by astronomy hobbyist David Rosenthal (<http://pbase.com/djrlx90>).
