

Don't touch this scope . . .

That's the whole point of a revolutionary Meade LightSwitch™ telescope. You don't have to touch your scope to align it on the sky each night before you can observe. It does the hard work for you, taking all the hassle out of setting up and using a telescope.

Simply flip a switch and your 6" or 8" Meade aligns itself on the sky automatically. It then takes you on a guided multimedia tour of the best objects in your sky, or you can choose from over 100,000 of them using the advanced AutoStar™ go-to computer hand control. Add Meade's time-tested Schmidt-Cassegrain optics or new Advanced Coma-Free optics, and you have a Meade LS™ – from \$1399 to \$1999, the most sophisticated and easiest to use telescope ever.
