

Why wait? Right now, you save \$100 to \$200 on a Celestron NexStar.

At their new lower prices, the Celestron NexStar SE go-to scopes are the best Celestron values we've ever seen . . . *period!*

Just look at these savings . . .

NexStar 4 SE, 4" Maksutov-Cassegrain, was \$599 **\$499**

NexStar 5 SE, 5" Schmidt-Cassegrain, was \$799 **699**

NexStar 6 SE, 6" Schmidt-Cassegrain, was \$999 **799**

NexStar 8 SE, 8" Schmidt-Cassegrain, was \$1399 **1199**

And look at all you get for those low prices . . .

- Simply point a NexStar at three bright stars and its *SkyAlign* computer orients itself on the night sky so it can find and follow *over 40,000* celestial objects for you at the touch of a button. A few minutes is all it takes.

- NexStar Starbright XLT optical multicoatings are brighter than ever, to let you see more and see it better. They are the same multicoatings used on the most ex-

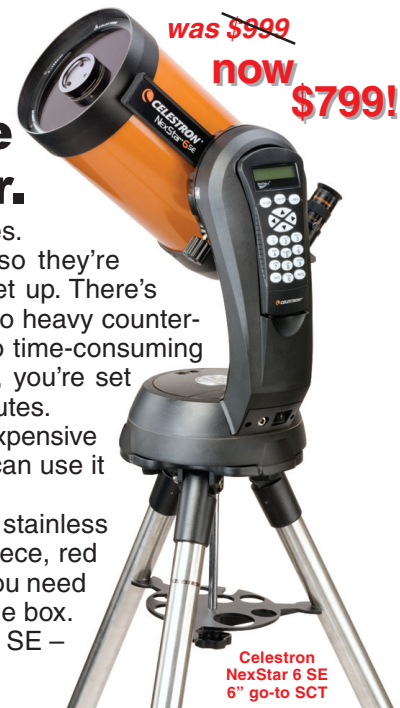

pensive Celestron scopes.

- NexStars are light, so they're easy to transport and set up. There's no huffing and puffing, no heavy counterweights to carry. With no time-consuming polar alignment needed, you're set up and observing in minutes.

- A NexStar runs off inexpensive flashlight batteries. You can use it anywhere.

- Each NexStar has a stainless steel tripod, Plössl eyepiece, red dot finder – everything you need to start observing is in the box.

The Celestron NexStar SE – *clearly better than ever!*
